## Particulate Phenomena and Multiphase Transport

Multi-phase transport and particulate phenomena applications are found in a wide range of engineering systems, such as heat exchangers, boilers, evaporators, condensers, boiling water reactors, particle separators, contamination detectors and controllers, filters, slurry transporters and fluidized beds. The 4th Miami International Symposium on Multi-Phase Transport and Particulate Phenomena has continued the tradition established by its three predecessors. It has provided a high level international platform for the presentation of the latest research results and for the exchange of ideas by the representatives of universities, research establishments, industry and government organizations from some forty countries. The five-volume proceedings entitled "Particulate Phenomena and Multiphase Transport" should serve as a valuable reference, covering the latest developments in the growing areas of multi-phase transport and particulate science and technology.
