Time Warps, String Edits, and Macromolecules: The Theory and Practice of Sequence Comparison

David Sankoff, Joseph Kruskal

Time Warps, String Edits, and Macromolecules: The Theory and Practice of Sequence Comparison
David Sankoff, Joseph Kruskal

Time Warps, String Edits and Macromolecules is a young classic in computational science. The computational perspective is that of sequence processing, in particular the problem of recognizing related sequences. The book is the first, and still best compilation of papers explaining how to measure distance between sequences, and how to compute that measure effectively. This is called string distance, Levenshtein distance, or edit distance. The book contains lucid explanations of the basic techniques; well-annotated examples of applications; mathematical analysis of its computational (algorithmic) complexity; and extensive discussion of the variants needed for weighted measures, timed sequences (songs), applications to continuous data, comparison of multiple sequences and extensions to tree-structures. This theory finds applications in molecular biology, speech recognition, analysis of bird song and error correcting in computer software.

From reader reviews:

Lewis Lin:

Do you have favorite book? Should you have, what is your favorite's book? Reserve is very important thing for us to be aware of everything in the world. Each publication has different aim or goal; it means that reserve has different type. Some people feel enjoy to spend their time to read a book. They are really reading whatever they have because their hobby is reading a book. What about the person who don't like studying a book? Sometime, person feel need book after they found difficult problem as well as exercise. Well, probably you will need this Time Warps, String Edits, and Macromolecules: The Theory and Practice of Sequence Comparison.

Marvin Boyer:

This book untitled Time Warps, String Edits, and Macromolecules: The Theory and Practice of Sequence Comparison to be one of several books which best seller in this year, honestly, that is because when you read this guide you can get a lot of benefit upon it. You will easily to buy that book in the book retail outlet or you can order it by means of online. The publisher with this book sells the e-book too. It makes you more readily to read this book, as you can read this book in your Smartphone. So there is no reason to you personally to past this e-book from your list.

Jill Weber:

People live in this new day time of lifestyle always make an effort to and must have the time or they will get great deal of stress from both daily life and work. So , when we ask do people have extra time, we will say absolutely sure. People is human not really a robot. Then we question again, what kind of activity are there when the spare time coming to you of course your answer will certainly unlimited right. Then ever try this one, reading publications. It can be your alternative inside spending your spare time, typically the book you have read is definitely Time Warps, String Edits, and Macromolecules: The Theory and Practice of Sequence Comparison.

Marian Buell:

As a college student exactly feel bored to be able to reading. If their teacher asked them to go to the library as well as to make summary for some publication, they are complained. Just minor students that has reading's heart or real their pastime. They just do what the professor want, like asked to go to the library. They go to there but nothing reading seriously. Any students feel that reading is not important, boring as well as can't see colorful images on there. Yeah, it is to become complicated. Book is very important for yourself. As we know that on this time, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country. Therefore , this Time Warps, String Edits, and Macromolecules: The Theory and Practice of Sequence Comparison can make you sense more interested to read.
