Palaeohydrology (Benchmark Papers in Hydrology)

Victor R. Baker

Palaeohydrology (Benchmark Papers in Hydrology) Victor R. Baker

Reproduces the Benchmark Papers that have and still influence palaeohydrological research, with commentaries on their significance.

Palaeohydrology originated with and continues to have a strong focus on palaeofluvial processes, especially palaeoflooding, and this is reflected in eight sections:

Channel Patterns and Regime commences with Davis's 1913 paper on underfit rivers, classics by Dury (1954, 1965) and Schumm (1968), and an important Polish contribution, Korzarski and Rotnicki (1977).

River Floodplains and Terraces illustrates how mapping and quantitative description became the basis for palaeo-hydrological interpretation of the landscape. Alluvial Chronology considers how the development of dating aided studies that identified major changes driven by climate.

Sediment Transport shows how engineering/geomorphologic understanding of sediment processes was initially used to back-calculate the flows associated with fluvial events.

Megaflows are high-discharge (greater than 10⁶ m³/s) flood flows now known to have been especially important at the end of the Pleistocene, but in 1923, Bretz's hypothesis of such "cataclysmic flows" was controversial. Palaeoflood Hydrology brings together the papers that mark the development from geological investigation of flood-scarred landscapes to a broader, global science rooted in environmental change studies.

Palaeobotanical evidence to aid palaeohydrological work originated in the 1960s, and Sigafoos (1964) is a significant contribution. Palaeolakes were found to afford information central to understanding past climate in the 1960s and three seminal papers are included.

An excellent resource for graduate and post-graduate level courses in hydrology and hydro-geomorphology, reproducing many important papers that are otherwise difficult to access.

The International Association of Hydrological Sciences is the world's premier member-based organization promoting the study and practice of Hydrology. Our books are authored, edited and produced at the highest level of quality, with the most current and thorough research.

Our publications and our work advance the science and the professional practice of Hydrology in a variety of Science and Engineering fields around the world.

The areas that we publish in include:

- Ground water
- Surface water
- Snow and ice hydrology
- Drought and desertification
- Runoff modelling
- Watershed
- Remote sensing
- Water quality
- Water resources and management
- Ecohydrology/hydro-ecology
- Erosion and sediment

-Tracer hydrology

From reader reviews:

Shameka Smith:

Book is actually written, printed, or descriptive for everything. You can learn everything you want by a e-book. Book has a different type. As we know that book is important matter to bring us around the world. Beside that you can your reading ability was fluently. A publication Palaeohydrology (Benchmark Papers in Hydrology) will make you to possibly be smarter. You can feel much more confidence if you can know about every little thing. But some of you think which open or reading a book make you bored. It's not make you fun. Why they may be thought like that? Have you in search of best book or suited book with you?

Clare Andrews:

The book Palaeohydrology (Benchmark Papers in Hydrology) can give more knowledge and also the precise product information about everything you want. So why must we leave the good thing like a book Palaeohydrology (Benchmark Papers in Hydrology)? Wide variety you have a different opinion about publication. But one aim that book can give many details for us. It is absolutely suitable. Right now, try to closer together with your book. Knowledge or facts that you take for that, you can give for each other; you could share all of these. Book Palaeohydrology (Benchmark Papers in Hydrology) has simple shape but the truth is know: it has great and large function for you. You can seem the enormous world by open up and read a reserve. So it is very wonderful.

Michael Espy:

What do you concerning book? It is not important with you? Or just adding material when you want something to explain what your own problem? How about your extra time? Or are you busy man? If you don't have spare time to complete others business, it is give you a sense of feeling bored faster. And you have extra time? What did you do? Everybody has many questions above. The doctor has to answer that question simply because just their can do that. It said that about guide. Book is familiar in each person. Yes, it is proper. Because start from on jardín de infancia until university need this particular Palaeohydrology (Benchmark Papers in Hydrology) to read.

Walter Burchett:

Now a day people that Living in the era exactly where everything reachable by talk with the internet and the resources inside can be true or not need people to be aware of each facts they get. How people have to be smart in getting any information nowadays? Of course the answer is reading a book. Examining a book can help individuals out of this uncertainty Information mainly this Palaeohydrology (Benchmark Papers in Hydrology) book since this book offers you rich details and knowledge. Of course the information in this book hundred pct guarantees there is no doubt in it you may already know.
